ISS Expedition Six crew busy with life science experiments

This week, the Expedition Six crew aboard the International Space Station marked their 100th day in space. They conducted another session on the Pulmonary Function in Flight experiment, known as PuFF. The experiment measures changes in the evenness of gas exchange in the lungs. Gas exchange unevenness is a hallmark of almost every pulmonary disease. By better understanding the human pulmonary system, clinical medicine on Earth may benefit. The experiment also will help prepare crews for longer space missions.

Women's History Month event at Marshall is March 20

To commemorate Women's History Month at the Marshall Center, Dr. Sheri M. Shuck, assistant professor of history at the University of Alabama in Huntsville, will discuss women in the workplace -- past, present and future. The event will be from 1-2 p.m. March 20 in Bldg. 4200, Room P-110. All Marshall team members are invited. For more information, call Billie Swinford at 544-0087.

'Take Our Children to Work Day' is April 24
